

APACHE SLING & FRIENDS TECH MEETUP

2-4 SEPTEMBER 2019

Cloud-Native Sling

Robert Munteanu, Adobe

Welcome

About me

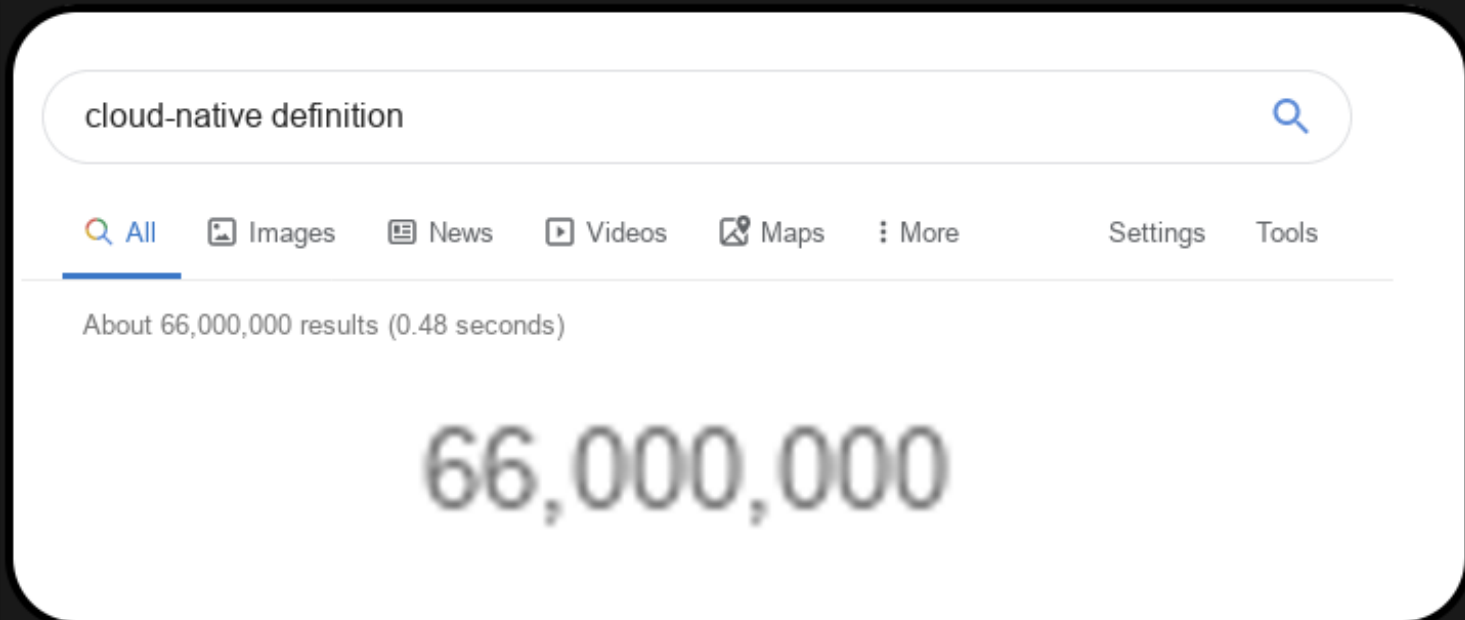

@rombert

Outline

- Cloud-native applications?
- Managing cloud-native applications
- Cloud-native Sling walkthrough
- Future plans
- Resources

Cloud-native applications?

Cloud-native applications

Defining cloud-native

- ↻ Using cloud-native services
- Application-centric design
- Automation

*Cloud Native Architectures -
Kamal Arora, Erik Farr, Tom Laszewski, Piyum Zonooz*

Managing cloud-native applications

Containers, container, containers

```
FROM openjdk:8-jre-alpine
MAINTAINER dev@sling.apache.org

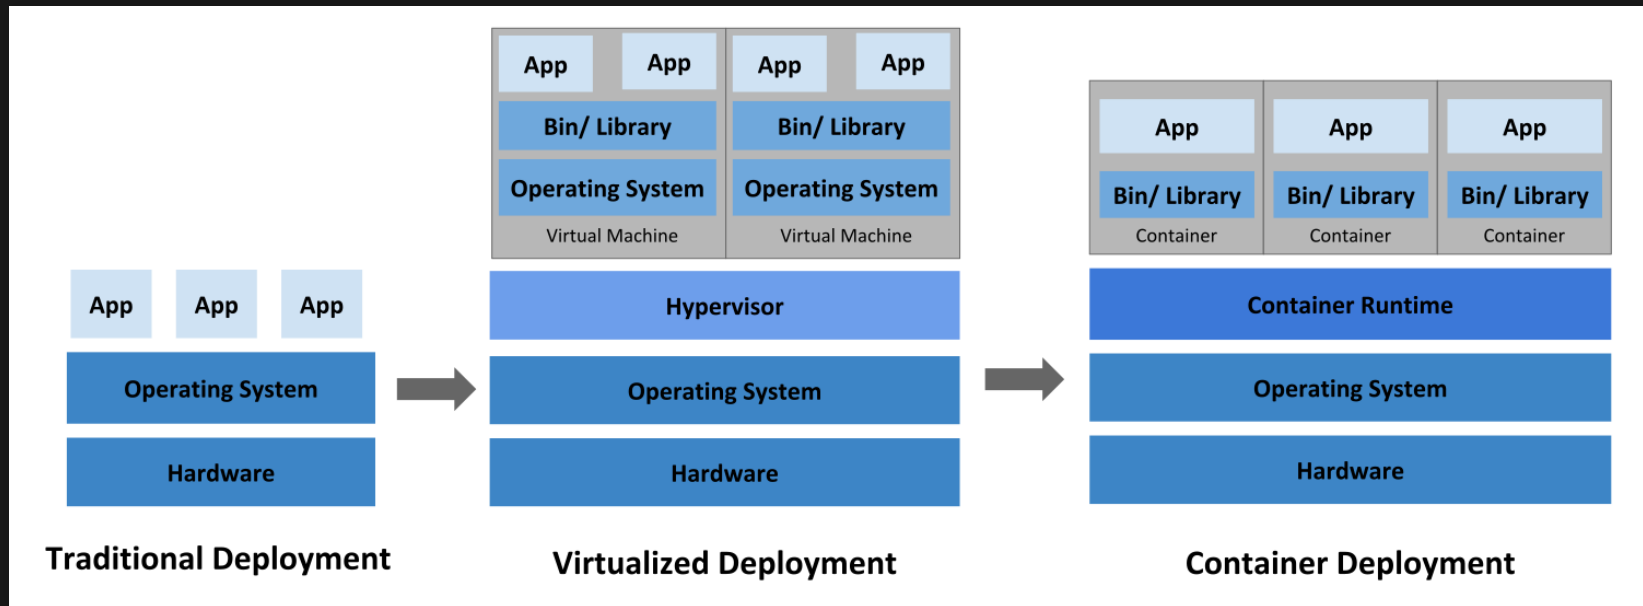

RUN mkdir -p /opt/sling
COPY target/sling-cloud-ready-*.jar /opt/sling/sling.jar

WORKDIR /opt/sling
EXPOSE 8080
VOLUME /opt/sling/sling

ENV JAVA_OPTS -Xmx512m
ENV SLING_OPTS ''

CMD exec java $JAVA_OPTS -jar sling.jar $SLING_OPTS
```

Kubernetes

Kubernetes

```
apiVersion: v1
kind: Pod
metadata:
  name: nginx-pod
  labels:
    name: wildfly-pod
spec:
  containers:
    - name: nginx
      image: nginx:1.17.1
      ports:
        - containerPort: 80
```

Kubernetes interface

```
$ kubectl get pods
```

NAME	READY	STATUS	A
grafana-78c6877b7f-ghmwp	1/1	Running	1
prometheus-alertmanager-5cfb66f7f7-mtrx2	2/2	Running	1
prometheus-kube-state-metrics-57d85676c5-bvh5j	1/1	Running	1
prometheus-node-exporter-5pdnf	1/1	Running	1
prometheus-node-exporter-6qf72	1/1	Running	1
prometheus-node-exporter-h7bjx	1/1	Running	1
prometheus-node-exporter-wrxfl	1/1	Running	1
prometheus-pushgateway-86cf78b9f4-4m4fc	1/1	Running	1
prometheus-server-747fc94b5d-fx5qf	2/2	Running	1

What does Kubernetes manage?

- Applications (Pods, Services, Deployments)
- DNS services
- Volume management (NFS, Ceph, Azure/GCE disks, AWS EBS, etc)
- Software-defined networking
- Resource quotas (CPU, Memory, etc)
- Rollouts, rollbacks and scaling
- Secrets

Cloud-native Sling walkthrough

Logging

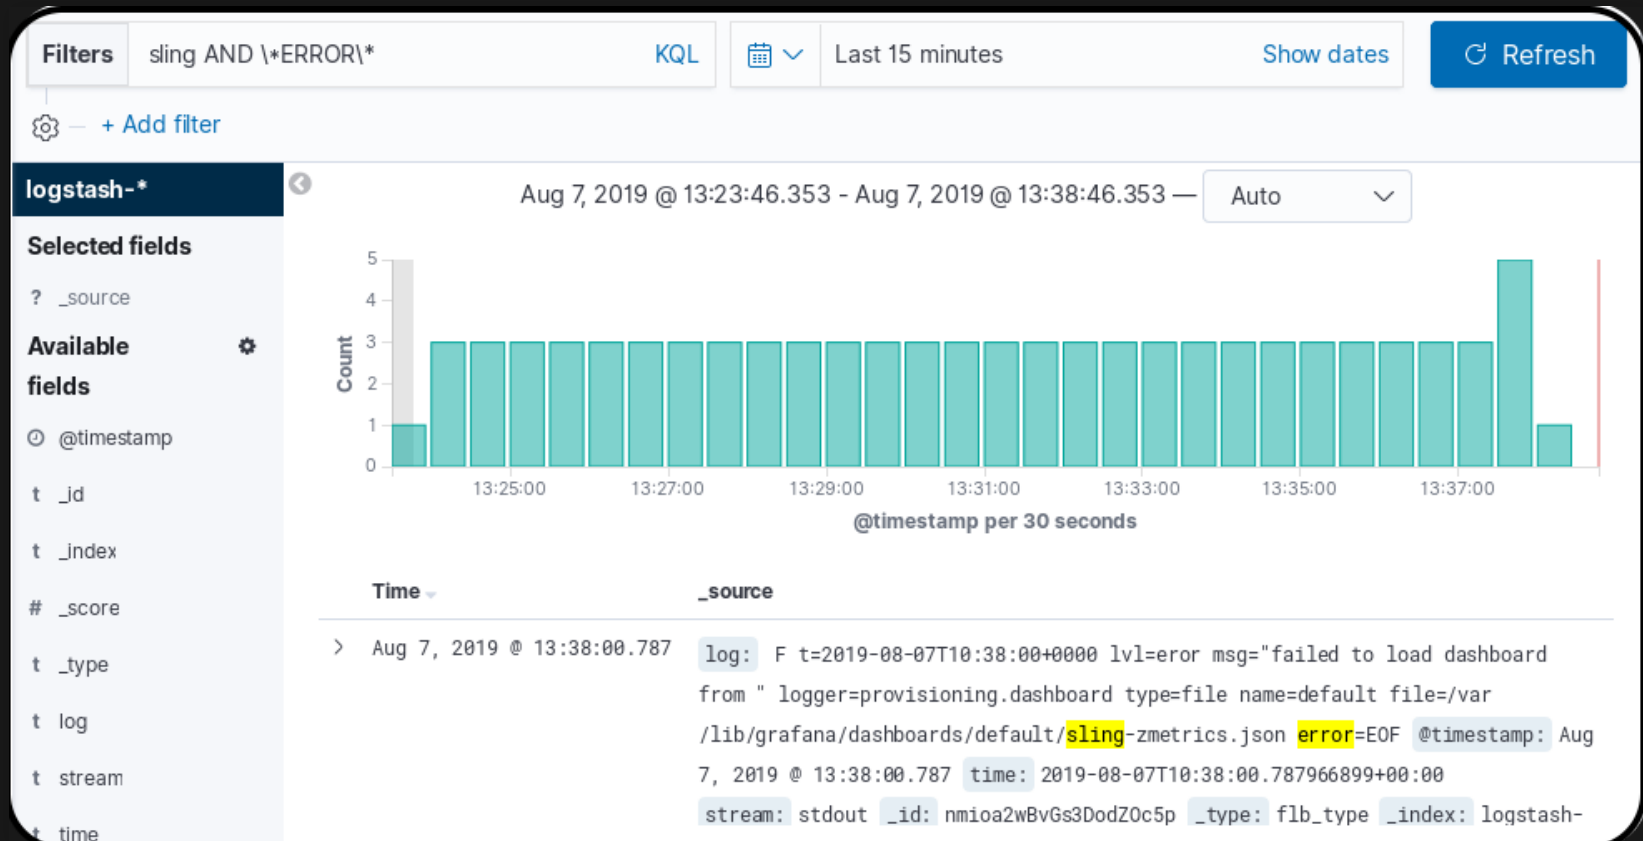

[configurations]

```
org.apache.sling.commons.log.LogManager  
org.apache.sling.commons.log.pattern="%d{dd.MM.yyyy HH:mm:ss.S  
org.apache.sling.commons.log.file=""  
org.apache.sling.commons.log.level="info"  
org.apache.sling.commons.log.packagingDataEnabled=B"true"
```

Logging

```
$ kubectl logs -f sling
07.08.2019 10:50:45.212 *INFO* [FelixStartLevel] org.apache.sling.co
07.08.2019 10:50:45.216 *INFO* [FelixStartLevel] org.apache.geronimo
07.08.2019 10:50:45.216 *INFO* [FelixStartLevel] org.apache.geronimo
07.08.2019 10:50:45.219 *INFO* [FelixStartLevel] org.apache.geronimo
07.08.2019 10:50:45.221 *INFO* [FelixStartLevel] org.apache.felix.ev
07.08.2019 10:50:45.225 *INFO* [FelixStartLevel] org.apache.felix.ev
```

Logging

Startup readiness

```
readinessProbe:  
  httpGet:  
    path: /  
    port: 8080  
  initialDelaySeconds: 15  
  periodSeconds: 5
```

Startup readiness

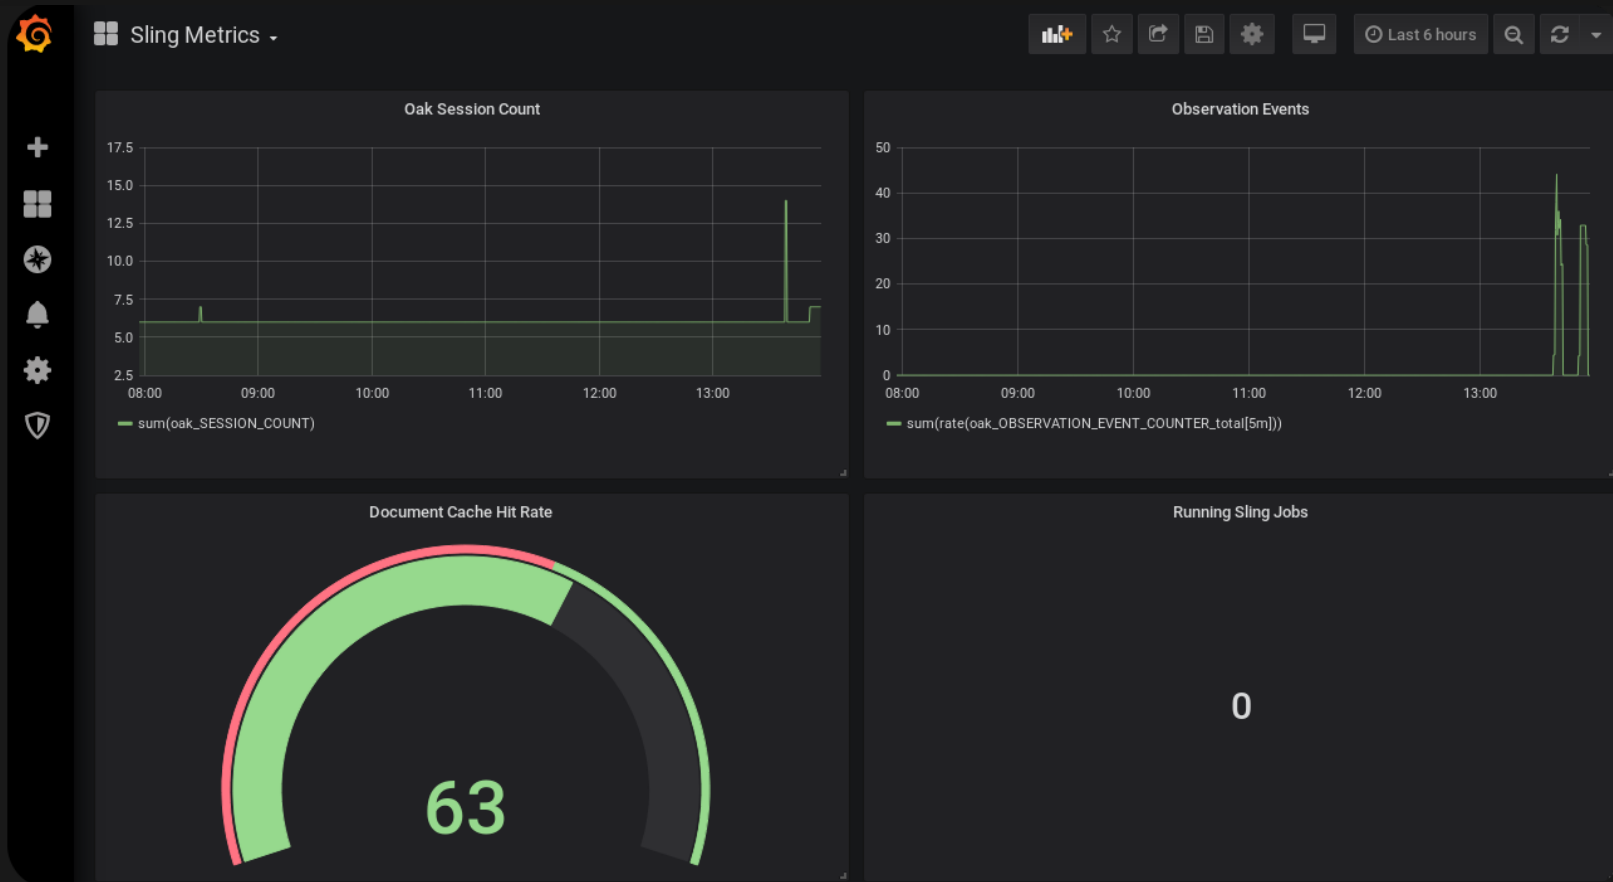

```
$ kubectl get pods -l=app=sling
```

NAME	READY	STATUS	AGE
sling-59c6d6c656-857vq	0/1	Running	23s
sling-59c6d6c656-9wlzm	0/1	Running	23s
sling-59c6d6c656-cbbwc	1/1	Running	13m

Monitoring

```
annotations:  
  prometheus.io/scrape: "true"  
  prometheus.io/port: "8080"
```

Monitoring

Persistence

```
$ kubectl get svc mongo
```

NAME	TYPE	CLUSTER-IP	EXTERNAL-IP	PORT(S)
mongo	ClusterIP	10.102.248.138	<none>	27017/TCP

Persistence

env:

- name: SLING_OPTS
value: -Dsling.run.modes=oak_mongo"

Persistence

```
apiVersion: v1
kind: PersistentVolumeClaim
metadata:
  name: sling-datastore
spec:
  accessModes:
    - ReadWriteMany
  resources:
    requests:
      storage: 10Gi
```

Scalability

```
- replicas: 1  
+ replicas: 3
```

Performance

```
org.apache.sling.dynamicinclude.Configuration-starter
include-filter.config.enabled=B"true"
include-filter.config.resource-types=["sling/starter/hostname"]
include-filter.config.path="/content/starter"
include-filter.config.include-type="SSI"
include-filter.config.add_comment=B
```

Performance

```
apiVersion: extensions/v1beta1
kind: Ingress
metadata:
  name: ingress-sling
  annotations:
    # use the shared ingress-nginx
    kubernetes.io/ingress.class: "nginx"
    # set sticky sessions via cookie
    nginx.ingress.kubernetes.io/affinity: "cookie"
    nginx.ingress.kubernetes.io/configuration-snippet: |
      ssi on;
```

Performance

```
<!-- SDI include (path: /content/starter/sidebar-extensions/hostna  
<h2>System information</h2>  
<p id="system-information">Currently running on host <span class=
```

Future plans

Feature model

- Next big thing™!
- Smaller docker images
- More flexible feature selection

Docker image extensibility

- Base image + extensions
- Bring your own JVM

Composite NodeStore

- Clear separation of code from data
- Prevent config installation races at startup
- Scripting Bundle Tracker

Drop sticky sessions

- Encapsulated tokens like AEM
- Need to account for Oak DocumentNodeStore background sync delay

All good things...
