

APACHE SLING & FRIENDS TECH MEETUP BERLIN, 25-27 SEPTEMBER 2017

Scaling up development of a modular code base Robert Munteanu – Adobe Systems Inc

@rombert

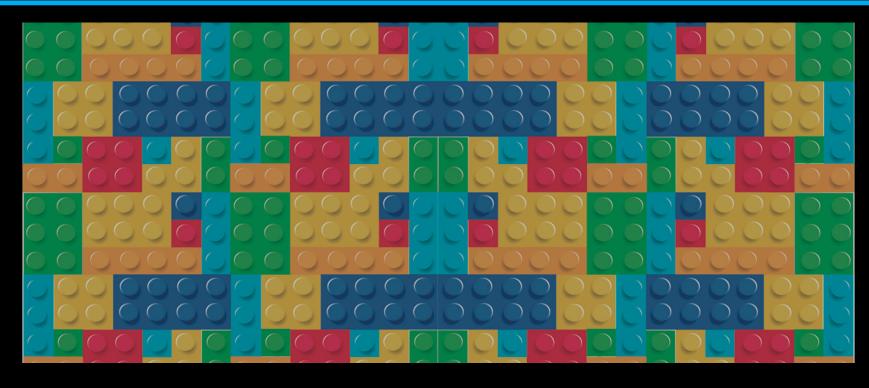

- Modular development
- Source control
- Build tool and continuous integration
- (Integrated) development environment
- Communication
- Wrap-up

Modular development

What is modular development?

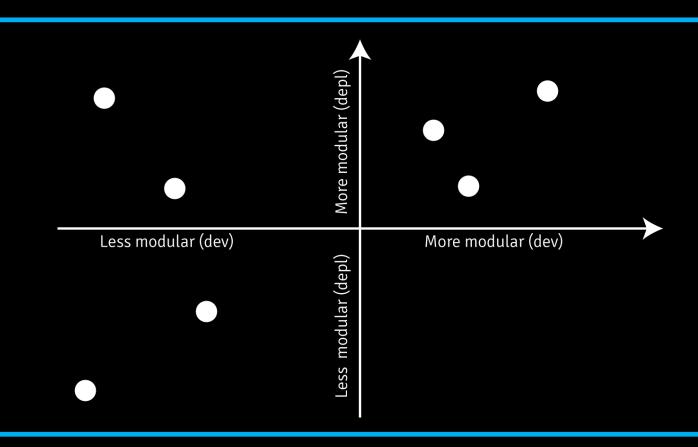

Modular development vs modular deployment

Development/Deployment	Not Modular	Modular
Not Modular		
Modular		IV

Modular development vs modular deployment

Source control

Source control: to split or not to split

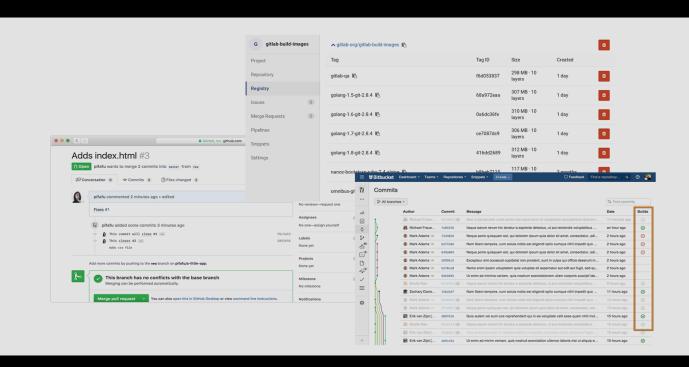

```
adaptTo()
```

```
$ svn checkout
https://svn.apache.org↔
    /repos/asf/sling/trunk sling
# change, commit atomically
$ svn ls https://svn.apache.org↔
    /repos/asf/sling/tags wc -l
1478
```

Source control: multiple repositories

Source control: repo (Android)

```
<?xml version="1.0" encoding="UTF-8"?>
<manifest>
  <remote name="origin" fetch=".." />
  <default revision="master" remote="origin" />
  project path="api" name="api.git"/>
  project path="impl" name="impl.git"/>
</manifest>
$ repo init -u git@github.com:org/manifest.git
 repo sync
 repo start new-feature api/ impl/
$ repo forall -c 'git push ...'
```

Source control: repo automation

```
#!/bin/sh
echo '<?xml version="1.0" encoding="UTF-8"?>'
echo "<!-- generated by $(basename $0) -->"
echo '<manifest>'
echo ' <remote name="origin" fetch="."/>'
echo ' <default revision="master" remote="origin"/>'
for repo in $(curl -s https://api.github.com/users/rombert/repos?sort=updated \
    | jq '.[] | .name | match ("TMP-sling-org.apache.sling.*") | .string' | tr
-d '"' | sort); do
    name=${repo#TMP-sling-}
    echo " <project path=\"${name}\" name=\"${repo}.git\"/>"
done
echo '</manifest>'
```

Source control: migrating to individual repositories

```
$ git clone https://github.com/apache/sling.git sling
$ git clone sling org.apache.sling.engine
$ cd org.apache.sling.engine
$ git filter-branch --subdirectory-filter
bundles/engine
$ git for-each-ref --format="%(refname)"
refs/original/
    xargs -n1 git update-ref -d
$ ls # only data in bundles/engine
```

Build tool and continuous integration

Build tool: the aggregate build

Build tool: repository

Build tool: automating creation of module builds

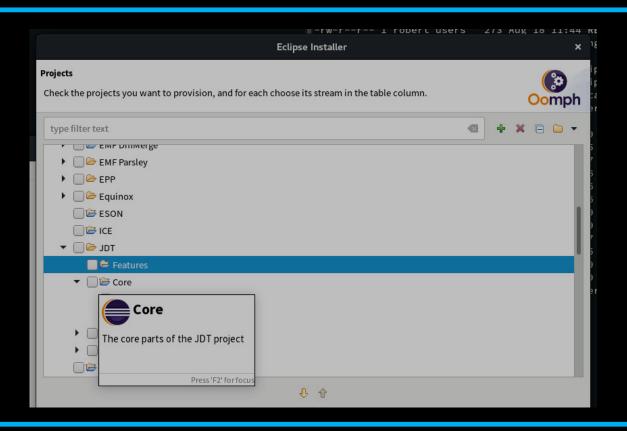

```
def modules = [
        location: 'bundles/api'
   ],
        location: 'bundles/auth/core'
   ] /* many others skipped */
modules.each { module ->
    jdks.each { jdkKey ->
        mavenJob(jobName(module.location, jdkKey)) {
            logRotator {
                numToKeep (15)
            triggers {
                snapshotDependencies(true)
                scm('H/15 * * * *')
            goals("-U clean deploy")
            /* other instructions skipped */
```

(Integrated) development environment

IDE: project discovery

IDE: shared preferences

```
<!-- package your preferences as a Maven artifact --->
<dependency>
   <groupId>org.acme.tooling
   <artifactId>acme-eclipse-formatter</artifactId>
   <version>1.0-SNAPSHOT
   <packaging>eclipse-formatter</packaging>
</dependency>
<!-- configure the plugin in your parent pom -->
<plugins>
   <plugin>
       <groupId>ro.lmn.maven.rip
       <artifactId>eclipse-preferences-maven-plugin</artifactId>
       <version>0.0.2
       <extensions>true</extensions>
       <configuration>
           <repository>
               <kind>jira</kind>
               <url>https://issues.apache.org/jira</url>
           </repository>
           <commitTemplate>${task.key} - ${task.description}\n\n</commitTemplate>
       </configuration>
   </plugin>
</plugins>
```

Communication

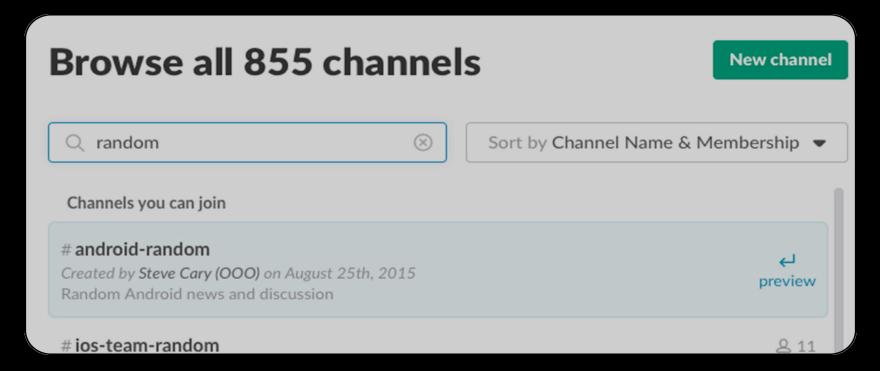

Communication: single channel

- [Openstack] OpenStack Keystone HA and Pacemaker on Ubuntu Imran Ahmed
- [Openstack] [openstack-dev] [PTG] Video interviews at PTG, now scheduling David Moreau Simard
 - [Openstack] [openstack-dev] [PTG] Video interviews at PTG, now scheduling Rich Bowen
- [Openstack] [heat] Lars-Erik Helander
- [Openstack] Neutron MySQL issues. Ken D'Ambrosio
- [Openstack] [FEMDC] IRC meeting Today 15:00 UTC lebre.adrien at free.fr
- [Openstack] [openstack] [pike] [neutron] Jai Singh Rana
- [Openstack] [heat] default collectors Volodymyr Litovka
- [Openstack] [Fuel] Danube Fuel 10 compute node base system partition size Jim Okken
- [Openstack] [cinder] [nova] Inconsistency Sinan Polat
- . [Openstack] Upload image to specific cinder backend Ray Sun
- [Openstack] MTU on Provider Networks John Petrini
 - [Openstack] MTU on Provider Networks Remo Mattei
 - . [Openstack] MTU on Provider Networks Curtis
 - [Openstack] MTU on Provider Networks John Petrini
- [Openstack] QEMU/KVM crash when mixing cpu_policy:dedicated and non-dedicated flavors? Tomas Brännström
 - [Openstack] QEMU/KVM crash when mixing cpu_policy:dedicated and non-dedicated flavors? Steve Gordon

Communication: multiple channels

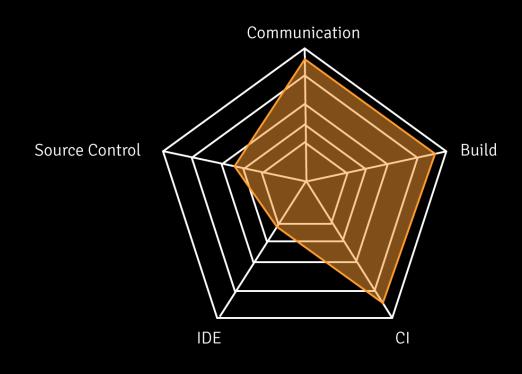

Communication: a split?

Wrap-up
